This is the first all-encompassing book about the visual language of man-made products, explaining how mass-produced objects evolve over time and what made them change. Form evolution behaves in a similar way to language evolution and, to some extent, even to natural evolution. In the book the author materializes the governing rules of form evolution by means of fourteen case studies.

By Nathan Cooke

An exploration into the forces that shape forms in mass manufactured products. It is particularly interesting because the author is designer/style agnostic, and more interested with the contexts that inform designs. I would recommend this to every designer interested in expanding their knowledge and vocabulary on the subject of discussing form in industrial design.
